

FAST • RELIABLE • ACCURATE

Our Pawfit GPS tracker works by connecting to three or more satellites to calculate your pet's precise location.

Unlike other trackers, Pawfit uses true 4g mobile technology to quickly and reliably send the GPS location updates to your phone app and clearly show your pet's location on the map.

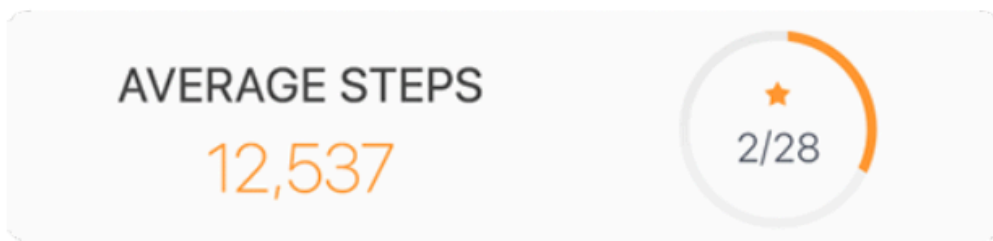

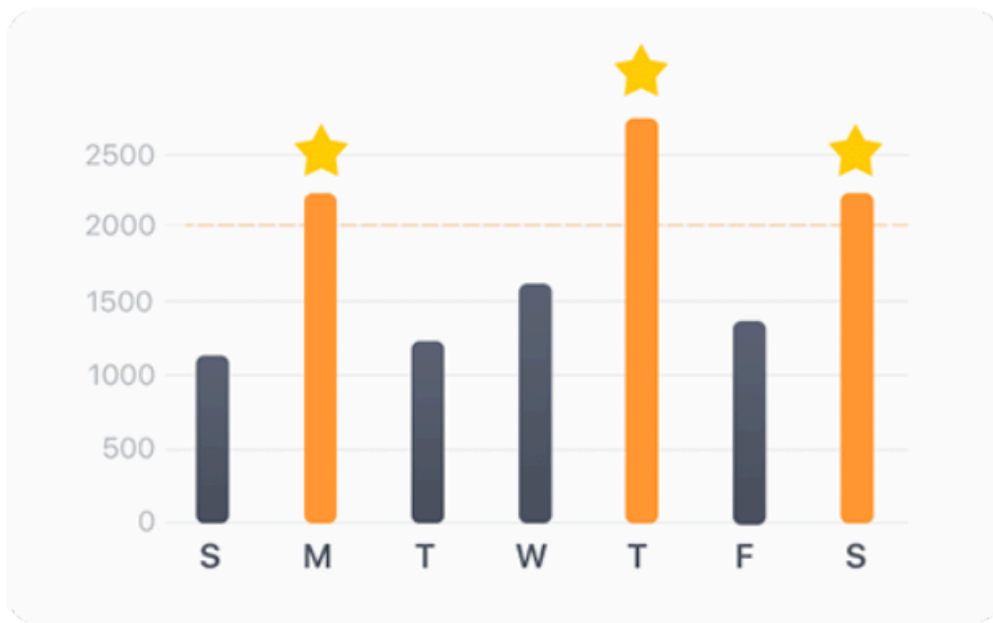

Embedded with a universal multi-network sim card, Pawfit trackers have uncompromised, far-reaching coverage meaning that where other trackers fail to connect, Pawfit has you covered.

It can be alarming not knowing where your pet is at all times. Pawfit trackers continuously track your pet's location with two unique tracking modes.

Some trackers can take minutes to start live tracking your pet's location. Pawfit's Find mode instantly activates live tracking and will update your pet's location every five seconds so you can find them FAST when it's most important.

In Regular modes, Pawfit sends location updates every 30 seconds to two hours, depending on how much movement is detected. As the tracker senses the level of pet activity, it will adjust location tracking needs accordingly to save the battery power.

HOW ACTIVITY DATA IS CALCULATED

Pawfit trackers combine your pet's profile information (breed, weight, and age) with their daily step count and use unique algorithms to calculate the number of calories they burned, distance they travelled and how active or inactive they are each day.

By looking at your pet's activity on a daily, weekly, and monthly basis, you can spot trends and gain a better insight into their daily life.

Let Pawfit take the guess work out of keeping your pet fit and healthy!

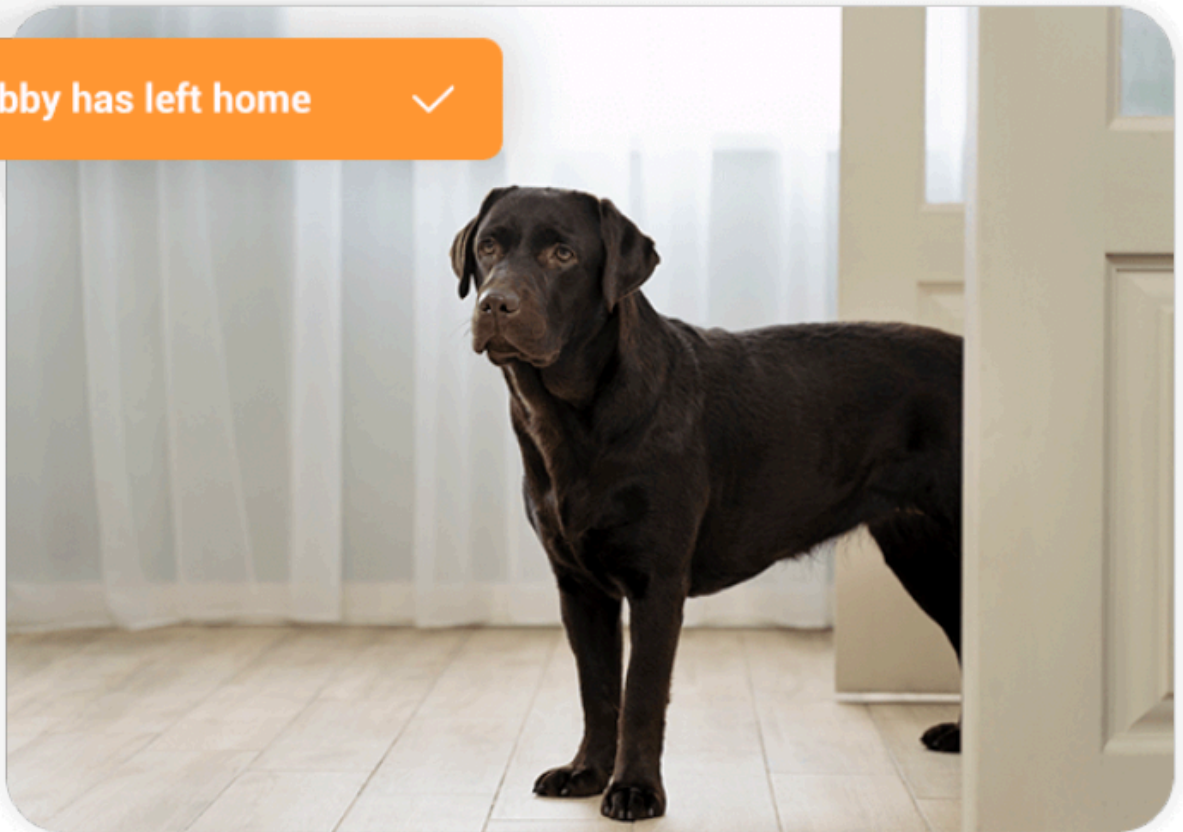

SAFETY ZONES

Time is of the essence when it comes to finding pets that have strayed from the safety of their homes.

Pawfit Safety Zones create a virtual fence around your home and yard, or any location where your pet spends time.

By syncing your WiFi to your safety zones, you get faster, more accurate notifications when you need them most. So, when your dog or cat leaves your customised virtual fence area, you can find them quickly.

BATTERY POWER MANAGEMENT

Pawfit trackers are equipped with long-lasting batteries (please check specific model for details)

Pawfit trackers are designed with multiple smart features to maximise battery life, so you spend more time focused on your pet, and less time charging it.

Pawfit's smart algorithm can tell when your dog or cat is playing or when they're just snoozing on the sofa, and automatically adjusts the location update frequency to save power.

Like most battery powered devices, how and where you use your tracker can impact its battery life. [Read more here.](#)
